Abstract: the purpose of this article is to demonstrate the trends in the development of methods of teaching foreign languages among humans. Moreover, you will be give information about pros and cons of using modern technology. Finally, there can be a variety of tips to learn foreign languages quickly.

Annotatsiya: ushbu maqolaning maqsadi odamlar orasida chet tillarini o'rgatish usullarini rivojlantirish, trendlarini ko'rsatishdir. Bundan tashqari, sizga zamonaviy texnologiyalardan foydalanishning ijobiy va salbiy tomonlari haqida ma'lumot beriladi. Oxirida, chet tillarini tezda o'rganish uchun turli xil maslahatlar bo'lishi mumkin.

Аннотация: цель данной статьи – показать тенденции развития методов обучения иностранным языкам среди населения. Кроме того, вы будете проинформированы о плюсах и минусах использования современных технологий. Наконец, могут быть различные советы по быстрому изучению иностранных языков.

Key words: smart technology, speaking skill, apps,

These days, smart technologies play essential role in peoples' life. Learning something by modern technologies like phones, computers are easy than learning offline. Technology can and should be used by language educators to enhance language instruction, practice, and assessment for learning language. Through the purposeful use of technology:

1. Students read, listen to, and view authentic, engaging, and timely materials from the target culture.

2. Students practice interpersonal skills as they interact video, audio, or text in real-time with other speakers of the target language.
3. Students collaborate on presentational tasks with their peers or teacher, anytime, anywhere.
4. Students work at their own pace as they access online content and/or utilize computer adaptive programs managed by their teacher.
5. Students practice discrete skills with engaging online games and applications.
6. Students benefit from differentiated instruction where multiple applications can be used to assess students, assign varied tasks, track data, give real-time feedback, and manage classrooms and lessons.

The use of technology is not a goal in and of itself; rather technology is one tool that supports language learners like they use the target language in culturally appropriate ways to accomplish authentic tasks. Further, all language learning opportunities whether facilitated through technology or in a classroom setting, should be standards-based, instructor-designed, learner-centered, and aimed at developing proficiency in the target language through interactive, meaningful, and cognitively engaging learning experiences. The development of technology is best driven by the needs of the language learner, supporting the kinds of interactions our students need to become college, career, life, and world-ready. Furthermore, technology increases the students' opportunity for authentic interaction with native speakers and other language learners at various levels within or outside the classroom. Practice leads to perfection and technology-rich language learning makes it possible.

Most importantly, there can be different advantages in learning by technologies.

- Learning something by apps.

Nowadays, there are interesting apps learning languages in the phone. They help us in order to learn language with easy and comfortable ways. Therefore, people may learn different things without teachers with games. This is really comfortable for all ages people. In additions, using apps for students is useful, since if student have some

problems in analyzing during lessons, they can watch this lessons from You Tube more until learning.

- Learning with native speakers

Pronunciation is essentially important during learning process, so they have problems with pronunciation because of not communicating with native speakers. If learners utilize from modern technologies during learning process, they can communicate and make friends with native speakers by chatting.

- Saving time and money

If we learn language by smart ones, we should not lose our time. Because we do not waste time for walking or finding new and cheap course. Nowadays, there are a lot of online courses for learning. This helps us for our finance and disturb extra expenses. Much more freedom is given to students within the classroom to decide how they approach the language and choose when and where to learn outside the classroom. Self-decision making and individual responsibility-taking stimulate more profound and enriching linguistic immersion.

- Making friends

We may find many friends from other countries. This is really useful to transform information and experience. Most importantly, it helps us to wide horizon.

The effective use of technology in foreign language teaching will make important contributions to both learning and teaching processes and this will lead to increased achievements (Birinci, 2019).

As for drawbacks, the biggest drawback of technology is that students can become distracted by it. In a recent study, researchers found that teachers who have some form of tablet-based devices in their classrooms are more likely to experience distractions in the classroom. There needs to be a way to limit the use of gadgets in schools to make sure they are used to help students learn and not, for example, to play games or use social media for fun. You can always count on a few bad students to try to use technology for fun instead of what it was made for. Another drawback of technology is that it makes cheating more likely. Technology can make the act of cheating as simple as a few clicks

of a mouse. This makes it harder for teachers to monitor students for cheating because everything is done behind a screen.

To conclude, my aim in this article is to create awareness about the pros and cons of using technology in education. Now that you've read all these information, it's time for you to make an informed decision and develop your own opinions.
