Introduction. The criteria for the formation and analysis of financial information on the organization of investment activities in the world are developed by international organizations, with special attention is paid to improving the management system of state national companies based on the requirements of this criterion. However, the current global pandemic conditions dramatically increase the likelihood that the economies of the world's countries will face a crisis. In particular, EU economists and

experts point out that investments are the most contributing factor to the recovery of economic activity in the “period” of economic crisis and in the event of a sharp decline in economic growth rates”. In such conditions, the importance of enterprises to make effective management decisions based on the analysis of investment activities is growing.

Analysis of thematic literature. In investment activities, it is important to improve economic efficiency, determine performance indicators, develop relevant conclusions based on their assessment. Research on the effectiveness of investment has been investigated by a number of theorists and practitioners of our country as a general economic problem. Including A. According to abduqaniyev, "in the Economic Sciences there are concepts - "efficiency" and "economic efficiency". They can be determined by Country, Network, enterprise, directions, as well as certain products. Economist scientist I.Q.Rajabov believes that " the concept of efficiency should be understood as an economic indicator that reflects the ultimate results of this production process. The essence of economic efficiency is expressed not only by arithmetic numbers between the results of production and costs, but also through the relations of production, distribution and turnover, which are associated with reducing the amount of costs on the way to profitable results. Production efficiency is an economic term that reflects production relations, not just an arithmetic ratio between costs and Results”.

Activities for the management of investment assets of investment funds are understood as the activities of a managing company that meet the requirements of the activities established by this article and the documents of the law. A legal entity that carries out activities in the management of investment assets of investment funds is called the managing company of investment funds. The company that manages investment funds is a professional shareholder of the securities market, which carries out activities on the management of investment assets of investment funds, as well as engaged in the purchase and sale of securities.

The company managing investment funds is formed in accordance with the legislation and provides securities issued to it by and on behalf of the investment fund; funds intended for investment in securities; funds earned in the Securities Management Process, trust management; creation of a portfolio of Investment Fund Securities and the provision of services for diversification of this portfolio; also, in accordance with the contract with the fund, a legal entity of any form of ownership is recognized, which carries out the task of the owner of the investment fund. The indicated transactions are characterized by absolute types of activities of the company managing investment funds.

The founders of the managing company can be legal entities and individuals, with the exception of the state government and governing bodies, as well as enterprises that make up more than 25 percent of the authorized capital fund established by them. The managing company of investment funds cannot be a depository, a state governing body, a non-profit organization, as well as an enterprise formed by an affiliated person (persons). Under the Charter of the company managing investment funds, there must be a condition that the management of the assets of investment funds is considered its absolute type of activity. Services for securities storage, Securities Exchange and validation are depository activities.

The activities and role of state financial institutions in the financial markets

A separate segment – the market of state capital and Services-operates and develops in the structure of the financial market in exchange for the purpose, functions, function, mechanism of activity, provisions and features of the activities of state financial institutions. In this, they are manifested as the executor of credit-money, budget-tax, investment, emission policies, which means the institutions and state regulator of operations related to the financial instruments and resources of the state, the accumulator of financial resources and instruments of the state and, respectively, the source of large investments, institutional investor, professional issuer and intermediary. As you can see, the state's undue financial institutions, along with banks, insurance companies and investment institutions, are not only participants in the professional,

extremely necessary, profitable and most significant Na of the financial market, but also regulators.
