Abstract: *At a time when young people make up a significant part of the world's population, it is important to recognize their influence on the changes taking place in modern countries. Young people are the biggest force, working to further improve science, technology, and the digital world, to make innovations an integral part of people's lifestyles. States, societies, and even the world are being renewed due to their initiative and desire to innovate. It is for this reason that creating the necessary conditions for them is being evaluated as the main goal and task by the countries of the world. Intellectual and potential youth is the biggest factor determining the status and influence of every country.*

Keywords: *Intellectual, potential youth, science, digital world, state and society, education, IT and robotics, ideas.*

In the world that is rapidly developing day by day, it is more important than ever to form a mature, intellectual, inquisitive, energetic and educated youth elite. First of all, gaining the influence of young people in public policy and society, ensuring their active participation, preventing the development of political absenteeism among them is considered as an effective management tool. The biggest factor that shapes a person as a person is education. The primary task of the current education policy is to achieve the modern quality of education, its compliance with the current and future needs of the individual, society and the state. The education system should provide equal conditions for young people to get a full education, regardless of the material wealth of the family,

place of residence, nationality and health. That is why every modern world country has been carrying out a number of practical works to develop the education of young people and ensure their quality education. It is the most important task for a person to get an education and gradually develop his level. We can witness exactly this process in the following scheme:

Figure 1. Scheme of dependence of human development on education

As an example, if we study the experience of the Japanese education system, which has one of the largest economies in the world, we can witness that the principle of "quality is more important than quantity" is a tool that embodies the whole system in a holistic way. The formation of healthy competition among students encourages them to search and work harder than ever. The formation of an elite of young people, eager to learn, hardworking and active from adolescence, greatly contributes to the expansion of the pool of mature personnel in the activities of society and the state. Nowadays, no matter what field we turn to, a significant part of renewal, innovations, changes and initiatives falls on the share of intellectual youth. In the 21st century, which is the age of technique and technology, the implementation of innovations in IT and robotics by young people is not a surprising phenomenon remains, because the views, thinking and striving for innovation of modern and intellectual youth are completely different from before. Young people, who were puzzled about ideas before, are now carrying out scientific and practical research on their implementation and the extent to which these innovations will affect the life of the state and society. Today, we can witness that the political sphere of every country is directly connected with the youth. If we look at the example of Uzbekistan, we can see that the state policy towards youth has completely changed, that is, the youth has become the main strength and influence of the state. A number of works were carried out on the practical application of their knowledge and acquired knowledge in each field. First of all, the establishment of the Youth Affairs Agency of the Republic of Uzbekistan and the work of this agency covering all the young people in the most remote villages on the republican scale to study their problems

and find systematic solutions is a clear proof. Takes In conclusion, it should be said that today's modern youth are not the youth of the past, and the current society is completely different from the past, that is, the changes in the minds and thinking of the youth that affect the development of the world and the formation of a new worldview are evident in every aspect. is showing itself. Intellectual and potential young people of the modern world are the owners of tomorrow.
