**ABSTRACT** This article explores the effective methods of improve reading skills and helpful modern strategies to new learners. By examining latest researches and practice in this field, teaching reading skills is taken into account in not only Uzbekistan but also, all around the world. That is why this article provides beneficial techniques that instructors are using to enhance reading proficiency among students at the beginning stage of their learning journey.

**Key words:** teaching reading, phonics-based instruction, multisensory approaches, digital learning platforms, gamification, collaborative learning, reading apps and e-books, data-driven instruction, interactive read-alouds.

### **INRODUCTION**

Language is a tool which people use it to communicate with each other. There so many countries in this world , just like that there are many languages. And English is one of the famous language. Nowadays there so many people are learning English language around the world and some of them facing some difficulties while learning. That is why there have so many articles, books for them in order to show the easy ways to learn a language. And in this article I show some solutions and ways in improving reading skills. It is true that there have other skills like speaking, listening, writing and they are also important but this article focus on how to improve reading skills and show easy ways for the new learners. Reading is a thinking activity. There are many definitions of reading.

Reading is creating meaning from printed text and from visual details. But reading is not easy. Reading is an activity that needs a lot of practice and ability (Moreillon, 2009). Also, (Spears, 2012) says reading is boring if there are many unknown words on the page, and having to search for many words in the dictionary takes a lot of time and can be disheartening <sup>1</sup>. Reading and speaking are inextricably linked, since scholars must be able to accurately articulate the words they read. Speaking abilities are required while reading aloud. Reading is also a useful skills since it allows us to receive and translate information for ourselves and others <sup>2</sup>.

**Methods** There are so many methods which are help improve reading skills. One of this is called multisensory approaches. Multisensory teaching is a method that uses more than one sense at the same time. Using seeing, listening, movement, and feeling allows kids to connect with what they are learning in different ways. This activity lets kids use sight, touch and sound to connect letters and their sounds. If we continue showing easy ways of learning languages, there have digital learning platforms. Digital learning platforms can provide many benefits for teaching literature, such as boosting student involvement and enthusiasm with interactive and multimedia materials, allowing for customization to meet each student's needs, broadening the variety of texts accessible, encouraging critical thinking and creativity, and improving evaluation and feedback. These platforms can offer sound, video, pictures, animations, games, digital writing, e-books, podcasts, blogs and online magazines for students to discover. And also collaborative learning is also beneficial for new learners. Collaborative learning is naturally a social activity where students and teachers, while exchanging knowledge, responsibility, and power, communicate with one another. It is through conversation that learning happens. In the last twenty years, Collaborative Learning methods and techniques ( for example. Collaborative Strategic Reading) has been broadly used in ESL and EFL environments. Many researches studies show that Collaborative Learning is helpful in improving the quality of ES/FL learning (August 1987, Wong Fillmore et al. 1985, Bejarano 1987, Freeman 1988, Ney 1991, Murray 1992, Nelson, Schmid 1989,

Flowerdew 1998, Roskams 1999). Nunan (1992) argues that working together in learning offers a practical and in many situations, a more successful option compared to the competitive mindset that prevails in much of today's educational ideas <sup>3</sup>.

### **Conclusion**

Teaching reading skills to new students has changed dramatically in recent years, thanks to current methodologies and technology breakthroughs. Phonics-based instruction, multimodal techniques, digital learning platforms, collaborative learning, reading applications and data-driven instruction all help to create interesting and successful learning environments. By embracing these modern strategies, instructors can help new students build excellent reading abilities, putting them on the path to lifetime learning and success.
