It is being implemented in Uzbekistan in the following years regional economic as a result of socio-economic reforms policy improvement and rich economic regions effective and reasonable in the development of the industry from its potential issues of use are important. In this regard, "Province, Districts and cities are complex and proportionate socio-economic development, effective from their existing potential and "optimal use" directions were determined.

Consistent implementation of structural changes in industrial sectors improvement, modernization and diversification processes continuity is the main factor of Uzbekistan's success is counted. New Uzbekistan for 2022-2026 industrial modernization in the development strategy and the main directions of diversification have been defined, and today the industry is highly developed and modernization of production, technical and technological consistent execution of network programs on updating all competitive with added value in the activity of networks is an important factor in the preparation of products.

Economic processes taking place in the world, the country programs used in the development of the economy, medium and long-term economic policies of the state strategies to implement an effective industrial strategy directed.

US industrial production size economy industry products of business entities integrated into the network is determined by Industrial production is the most important sector 78 percent of the total production is his share is correct. Within US industrial production networks chemistry (12 percent), food, tobacco (11 percent), mechanical engineering (6 percent), finished metal products (6 percent), computer and electronic products (6 percent) occupy the leading positions. This indicator in Germany Making up 79 percent, within the industrial production sectors machinery

and equipment (12 percent), motor vehicles, trailers and semi-trailers (12 percent), metal and finished metal goods (10 percent) computers, electronic and optical products and electrical equipment (10 percent) has a large share. By the end of 2019 according to countries with a very high share of industrial production in GDP including Ireland (30.8 percent), China (27.2 percent), and Korea Republic (25.4), Thailand (25.3) occupying the top places is standing.

Currently, the effective use of regional potential in the development of industry in foreign countries, increase the weight of innovative developments, new industry, impact on the priority development of promising industries special attention to the issues of determining indicators being directed.

Among the regions of our country, the Republic of Karakalpakstan has rich mineral resources, land and water It is distinguished by the limited reserves, the problems of the Aral Sea of international importance. This is the case of the industry natural and economic potential of the region in development effective use of advantages, socio-economic development of a long-term strategy aimed at reducing the impact of negative factors on development and its consistency requires implementation with.

This strategy is directly related to the industrial sector related to development and overall economic growth we need to distinguish a number of strategic directions.

In particular:

1. Networks and production in world markets high technologies to increase the competitiveness of products and achieving innovation by developing markets.
2. Reducing inequality in regional development. This the task is to determine the competitive advantages of different regions and According to the obtained results, regional economic growth implementation by creating centers.
3. Increasing the number of qualified specialists in the industry. This is a task focusing mainly on education and social sector development must
4. Development of the resource base, renewable introduction of fuel and energy resources and energy saving system modernization of the fuel and energy complex at the expense of to do

5. Environmental safety policy and environmental regulation system development. In this regard, the degree to which the state can be allowed to affect the environment development of a new system of standardization, as well as environmentally safe waste disposal processes support for enterprises aimed at modernization, including environmentally friendly and energy-saving production tax on companies using technology It is appropriate if benefits are planned.
